Okay.

The ph, temp, and conductivity will be measured using the YSI Water Quality Meter while the turbidity, alkalinity, ferrous iron, and dissolved sulfide will be recorded using the HACH field screening kits.

Thanks,

Suddha Graves

I will weigh in only on the issue of running field parameters.

Please include standard field physical measurements such as pH, temp. conductivity, turbidity, alkalinity, ferrous iron, and dissolved sulfide etc.

thanks

Rich

Good evening Rich,  
Thanks for providing the information regarding round 2 sampling at Dimock. I should be able to submit the Draft Sampling Plan on Friday. If you need it before then, please let me know.

A couple initial questions I have are:

- Do you still want a sample collected at the wellhead and at the kitchen faucet for each home to be sampled?
- Do you still want field screening to be completed (turbidity, alkalinity, ferrous iron, and dissolved sulfide). These tests were done using the HACH field screening kits.

Thanks,

Suddha Graves

Suddha,  
attached is our plan of action which should form the basis for you to draft the round 2 sampling plan. We will need that sampling plan drafted as soon as you can, so it can be reviewed by other EPA offices. Please let me know if you have any questions and/or if you feel the need to have a conference call to discuss the plan first. Otherwise, can you give me an idea of when you may have a draft prepared. Right now we don't know what week we may be resampling, since we don't know how the plan will be changed when reviewed. I will keep you posted on that.  
thanks.
